

WEEK 1 - DAY 2

LOWER BODY

Quads / Hamstrings / Glutes / Calves | Age 38 Optimized | Body Recomposition (95kg -> 80kg)

Pre-Workout: 30-40 min	Main: 60-75 min	Post-Workout: 40-50 min
------------------------	-----------------	-------------------------

PRE-WORKOUT FOUNDATION PROTOCOL (30-40 min)

SCIENCE: At age 38, extended sport-specific warm-ups are CRITICAL. Research shows: 1) Reduces injury risk by 50%+, 2) Improves neural drive and force production, 3) Increases joint synovial fluid for better mobility. Never skip!

Exercise	Sets x Reps	Rest	Age 38 Progression Notes
1. PUSH-UPS (Full ROM)	3 x 12 = 36	30-45s	Chest to floor, protect shoulders
2. PULL-UPS (Mixed Grip OK)	3 x 5 = 15	60-90s	Dead hang, control eccentric
3. WEIGHTED SQUATS (Goblet)	3 x 12 = 36 @ 12kg	45-60s	Below parallel, knee health

FORM CUES (AGE 38 JOINT PROTECTION):

- Push-ups: Hands slightly wider than shoulders, elbows at 45deg (not 90deg flared)
- Pull-ups: Full dead hang, controlled descent (3s negative), vary grip weekly
- Squats: Sit back into hips FIRST, knees track toes, stop if knee pain

MAIN WORKOUT (60-75 min)

SCIENCE: META-ANALYSIS (PMC5684266): Medium-High Weekly Set volume (5-10+ sets/muscle) produces 15-23% greater strength gains. Tempo 2-1-2 (slower) protects joints at 38. Rest: 2-3min compounds (ATP), 60-90s isolation (metabolic stress). BODY RECOMP: Compound lifts preserve muscle in caloric deficit.

Exercise	Sets	Reps/Tempo	Rest	Technique Notes
Barbell Back Squat	4	6-8 @3-1-2	3min	Below parallel IF mobility allows
Romanian Deadlift	4	8-10 @3-1-2	2min	Hip hinge, hamstring stretch, no bounce
Walking Lunges	3	10 each @2-1-2	90s	Shorter stride at 95kg for knee safety
Leg Press	4	10-12 @2-1-2	90s	Feet high+wide for glutes, no knee lock
Leg Curl (Lying)	3	12-15 @2-1-2	60s	3s eccentric for hamstring TUT
Calf Raises (Seated)	4	15-20 @2-2-2	45s	2s pause at top, full stretch
Hip Thrusts	4	12-15 @2-2-2	90s	Glute builder - critical at 38
Core: Dead Bug	3	10 each @3-0-3	30s	Spine stability for heavy lifts

POST-WORKOUT CARDIO (35-45 min)

SCIENCE: BODY RECOMPOSITION KEY: Post-workout LISS cardio maximizes fat oxidation without impairing muscle protein synthesis. At 95kg, walking burns ~85-95 kcal/km. This 3km adds ~270 kcal expenditure toward your 500-700 kcal deficit!

Activity	Distance	Target Pace	Calories Burned
1. Main Walk (Moderate)	2.0 km	13-14 min/km	~170-190 kcal
2. Recovery Walk (Easy)	1.0 km	15-16 min/km	~85-95 kcal
TOTAL	3.0 km	35-45 min	~255-285 kcal

WEEK 1 - DAY 2

LOWER BODY

Quads / Hamstrings / Glutes / Calves | Age 38 Optimized | Body Recomposition (95kg -> 80kg)

BODY RECOMPOSITION WALKING TIPS (95kg -> 80kg):

- * Walking at 95kg burns 30% MORE calories than at 80kg - use this advantage!
- * Post-workout = peak fat oxidation window (glycogen depleted)
- * Add inclines or stairs when available for +50% calorie burn
- * Track steps: aim for 10,000+/day (including this walk)

COOL-DOWN STRETCHING (10-15 min)

Stretch	Duration	Done
Standing Quad Stretch	45 sec each	<input type="checkbox"/>
Seated Hamstring Stretch	45 sec each	<input type="checkbox"/>
Pigeon Pose	60 sec each	<input type="checkbox"/>
Hip Flexor Stretch	45 sec each	<input type="checkbox"/>
Calf Stretch Against Wall	30 sec each	<input type="checkbox"/>
Figure 4 Stretch	45 sec each	<input type="checkbox"/>

WEEK 1 - DAY 2

LOWER BODY

Quads / Hamstrings / Glutes / Calves | Age 38 Optimized | Body Recomposition (95kg -> 80kg)
